DETAILED ACTION

1. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to **Group Art Unit 1648**.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to an adenovirus particulate, classified in class 424, subclass 233.1.
 - II. Claims 7-17, drawn to a method of forming a particulate, classified in class 435, subclass 7.1.
 - III. Claim 18, drawn to a method of transfecting a dendritic cell, classified in class 435, subclass 5.
 - IV. Claims 19-20, drawn to a method of vaccinating a subject, classified in class 424, subclass 9.1.
3. The inventions are distinct, each from the other because of the following reasons:
 - a) Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process can be used to make a diagnostic plate that detects antibodies to adenovirus.

Art Unit: 1648

b) Inventions I and (III-IV) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product can be used in a method of transfecting a dendritic cell or vaccinating a subject.

c) Inventions II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to methods that have different modes of operation, function and effect. None of the methods are disclosed as capable of use together.

Because these inventions are distinct for the reasons given above and the literature search required for one group is not required or co-extensive for any other group, and therefore burdensome, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
